

	Excellent	Good	Fair	Poor	Very Poor
Print Transfer of Information to Similar Model	Good utilization of print statement and input statement	Created lines of code to display correct answer but are not formatted nicely	The variables are present but the created lines of code lack proper syntax	Poor understanding of syntax, logic, and use of print and input statements	There is no demonstration of understanding of syntax, logic, and use of print function
Communication Language used describing "Transfer of Information to Similar Model"	Creativity is evident and structure is accurate; virtually error-free code	Clear language; complex sentence structure with only minor errors; engages fellow students	Noticeable grammatical mistakes but meaning is clear; appropriate sense of audience	Repeated grammatical mistakes but general meaning is clear; limited sense of intended audience (very general)	Limited scope and word choice; little or no organization; frequent and serious grammatical mistakes make meaning unclear; no sense of intended audience

	Excellent	Good	Fair	Poor	Very Poor
Syntax and Logic of While Loop Demonstrate logical use and syntax of While Loop	Creativity is evident and structure is accurate; virtually error-free code	Clear language; complex code structure with only minor syntax errors; engages fellow students	Noticeable syntax mistakes but some logic is present; appropriate sense of audience	Repeated syntax errors but intent is partially clear; limited sense of intended audience (very general)	Little or no syntax and code does not logically demonstrate intended purpose.
Demonstrate creativity in logic and math Creatively think of how to create a line of code which will convert a number to a percent.	The line converts the number provided by the user to the appropriate percentage equivalent.	The line converts the number provided by the user to a number approximately equal to the equivalent percentage.	The line converts the number provided by the user to another number not equal to the equivalent percentage.	The line does not convert the number provided by the user to another number.	No new line of code was present.
